Use Case Template

CardioAI - Heart Disease Prediction System

1. Use Case Title	Enter Patient Clinical Data
2. Abbreviated Title	Enter Clinical Data
3. Use Case Id	UC-01
4. Actors	Clinician (Primary)
5. Description	The Clinician enters 13 physiological features for a patient (Age, Gender, Chest Pain Type, Resting BP, Cholesterol, Fasting Blood Sugar, Resting ECG, Max Heart Rate, Exercise Angina, ST Depression, ST Slope, Number of Major Vessels, Thalassemia) into the CardioAI web dashboard input form.
5.1. Pre Conditions	1. Clinician has access to the CardioAI web dashboard. 2. Patient's clinical data is available from medical records.
5.2. Task Sequence	1. Clinician opens the CardioAI dashboard. 2. System displays the Parameter Input form with 3 columns. 3. Clinician enters patient data using input fields, sliders, and dropdowns. 4. System validates inputs in real-time (range checks, required fields). 5. System confirms all 13 features are populated and valid.
5.3. Post Conditions	1. Patient data is captured in the frontend form. 2. Data is ready for prediction submission or record storage.
6. Modification History	Date: September 11, 2026
7. Author	Dhruv Singla (1024170434), Srishti (1024170451)
