Use Case Template

CardioAI - Heart Disease Prediction System

1. Use Case Title	Search Patient History
2. Abbreviated Title	Search History
3. Use Case Id	UC-06
4. Actors	Clinician (Primary), Patient (Stakeholder), MySQL Database (Supporting)
5. Description	The Clinician searches for a patient's historical records including past predictions, risk trends over time, and previously generated diagnostic reports stored in the MySQL database.
5.1. Pre Conditions	1. Patient records exist in the MySQL database. 2. Database connection is active.
5.2. Task Sequence	1. Clinician navigates to the Patient History section. 2. Clinician enters patient identifier (Name or ID). 3. System invokes UC-15: Manage Patient Records to query the database. 4. System retrieves and displays matching records. 5. System renders a timeline or trend chart of past risk predictions.
5.3. Post Conditions	1. Patient's longitudinal history is displayed. 2. Past predictions and trend data are available for review.
6. Modification History	Date: September 11, 2026
7. Author	Dhruv Singla (1024170434), Srishti (1024170451)
