Use Case Template

CardioAI - Heart Disease Prediction System

1. Use Case Title	Manage Patient Records
2. Abbreviated Title	Manage Records
3. Use Case Id	UC-15
4. Actors	MySQL Database (Supporting)
5. Description	The system performs CRUD (Create, Read, Update, Delete) operations on patient records in the MySQL database, including storing prediction results, updating demographics, and retrieving longitudinal history.
5.1. Pre Conditions	1. MySQL database server is running and accessible. 2. Database schema (patients, predictions tables) is initialized.
5.2. Task Sequence	1. Create: System inserts a new patient record with demographics and prediction. 2. Read: System retrieves a patient record by ID or search criteria. 3. Update: System appends new prediction results to existing patient history. 4. Delete: System removes a patient record (soft delete with audit trail).
5.3. Post Conditions	1. Patient record is created, updated, retrieved, or deleted as requested. 2. Database maintains referential integrity and audit trail.
6. Modification History	Date: September 11, 2026
7. Author	Dhruv Singla (1024170434), Srishti (1024170451)
