HEART DISEASE PREDICTION REPORT

Explainable Deep Learning Diagnosis Platform (CNN-LSTM-Attention + Grad-CAM)

Patient Index	#10	**True Label (Ground Truth)**	Heart Disease
Model Prediction Probability	99.97%	**Analysis Date**	2026-06-23

Model Recommendation: HEART DISEASE PREDICTED

Patient Clinical Profile

Age	62 years	**Sex**	Female
Chest Pain Type (CP)	Atypical Angina	**Resting Blood Pressure**	120 mm Hg
Serum Cholesterol	281 mg/dl	**Fasting Blood Sugar (FBS)**	Normal (<=120 mg/dl)
Resting ECG	Left Ventricular Hypertrophy	**Max Heart Rate (Thalach)**	103 bpm
Exercise Induced Angina	No	**ST Depression (Oldpeak)**	1.4
ST Slope	Flat	**Vessels via Fluoroscopy (CA)**	1
Thalassemia (Thal)	Reversible Defect	**Predicted Diagnosis Probability**	**99.97%**

Primary Diagnostic Drivers (AI Focus)

1. CP

Patient Value: 2.0 | **Ideal Range:** 1, 2, or 3 (Angina/Non-anginal pain)

Interpretation: *Chest pain type 2 (Angina or localized chest pain).*

2. CA

Patient Value: 1.0 | **Ideal Range:** 0 vessels colored

Interpretation: *1 major vessel(s) colored under fluoroscopy, indicating significant arterial obstruction.*

3. RESTECG

Patient Value: 2.0 | **Ideal Range:** 0 (Normal)

Interpretation: *Abnormal ECG resting results (type 2), suggesting hypertrophy or ST-T wave anomalies.*

4. SLOPE

Patient Value: 2.0 | **Ideal Range:** 1 (Upsloping)

Interpretation: *Flat/downsloping ST segment (slope type 2), strongly correlating with coronary ischemia.*

Secondary Clinical Abnormalities (Outside Top AI Focus)

1. CHOL

Patient Value: 281.0 | **Ideal Range:** <200 mg/dl

Interpretation: *Measured at 281.0 mg/dl. High cholesterol level, indicating severe plaque build-up risk in coronary arteries.*

2. THALACH

Patient Value: 103.0 | **Ideal Range:** >134 bpm (85% of max predicted 158 bpm)

Interpretation: *Measured at 103.0 bpm (only 65.2% of age-predicted max). This chronotropic incompetence suggests restricted cardiac output.*

3. OLDPEAK

Patient Value: 1.4 | **Ideal Range:** 0.0 mm (No ST deviation)

Interpretation: *Measured at 1.4 mm. Significant ST segment depression suggests active myocardial ischemia during stress.*

4. THAL

Patient Value: 7.0 | **Ideal Range:** 3 (Normal)

Interpretation: *Reversible defect thalassemia observed (indicating active myocardial ischemia under stress).*
